Attendees

Yuhan Ke, Suma Priya Davuluri, Van Thawng, and Shubham Bhagat

General meeting Info:

Meeting Purpose: Discussing our Sprint 5 progress and what module (work product) we had developed.

Start Time: 10/31/2021: 09:30 pm

Stop Time: 10/31/2021: 10:00pm

Discussions Summary:

In today's demo, we have demonstrated the working of following modules:

1. **Graph:** To see which products are the most rented graph will be provided for the admin. This will provide which products should be listed more and for admin to look more into the type of product to list.
2. **Chat:** Demo of the chat bot was presented. The code uses JavaScript and html to make it work. Responses are loaded into the JavaScript function and retrieved depending on what the user put in the chatbot.
3. **Admin Product Approval:** Demo of our admin approval page. Admin can now approve a product that has been listed in the platform and or disapprove them.
4. **Speech to text:** To assist user with their searching experience, speech to text was demoed so that user can use their voice to search up products that are listed.
5. **Product details Page:** Users can view all the details of an available product such as product images, product title, description, price, category, status, location, seller information.
6. **Account Dashboard:** This sections personalized for every user. It displays the product listed by that user, rented by that user and also his past rented products.

New Action Items:

Our next step of the project is to refactor the backend logic to add some additional entities such as reviews and product recommendation. Furthermore, the UI part of the product details section will be finished. Going further, we will also be integrating sorting and filtering functionality to the product listing module. Additional feature that involves OTP is also waiting to be finished.
