

**Team 16**  
**Date: 09//11/2021**  
**CSCI-P465/565 (Software Engineering I)**

**Attendees**

**Yuhan Ke, Suma Priya Davuluri , Van Thawng , and Shubham Bhagat**

**General meeting Info:**

**Meeting Purpose:** Discussing our Sprint 1 progress and what module (work product) we had developed.

**Start Time:** 10/03/2021: 10:00pm

**Stop Time:** 10/03/2021: 10:50pm

**Discussions Summary:**

This week during our meeting with our client, we were able to present what we had so far. We had a demo of the login form using local database connection. Furthermore, we gave a demo of the user interface of the website design using **online UI prototyping tool – Figma**. This helped the customer to get the feel of the website before we start the actual front-end coding. We elaborated the UI designs which maps out important details of the project.

Aside from this, we discussed code issues that we encountered that hindered our process of completing and having a full login system. We explained how the login system using local database works and how we will be proceeding ahead with integrating OAuth authentication for sign-in using Google and Facebook profile.

**New Action Items:**

Our next step of the project is to have a complete login system running and working. We will be trying to integrate OAuth in our login system. Furthermore, the group members will also start learning bootstrap framework for making a responsive UI.
