Date: 10/17/2021
CSCI-P465/565 (Software Engineering I)

Attendees
Yuhan Ke, Suma Priya Davuluri , Van Thawng , and Shubham Bhagat

General meeting Info:

Meeting Purpose: Discussing our Sprint 2 progress and what module (work product) we had developed.
Start Time: 10/17/2021: 6:10pm
Stop Time: 10/17/2021: 7:00pm

Discussions Summary:

In the demo for sprint 2, we were able to show what we had done so far. We explained the functionality of adding the product in the database, editing the product information, deleting the product, and displaying list of products from the database to the webpage.

We were also able to do a demo of login form which allowed users to sign-in using their google account. For this, we used OAuth API. Along with product upload and listing functionality, one more feature was demonstrated wherein the user can enter a keyword to search the product.

For this sprint, major focus was on developing the backend logic. We explained to the customer how we followed the MVC structure while developing the backend logic. We also talked about the security precautions that we have taken for user authentication such using hashed passwords and session management for user registration and login.

New Action Items:

Our next step of the project is to refactor the backend logic to add some additional entities such as reviews, customer location, and images of product. Furthermore, the UI part of the home, login, customer profile and product will be finished. Going further, we will also be integrating the login module with product listing module.
